VERSION RELEASE HISTORY	31

Virto Mini Calendar Web Part 2.1.2 for SharePoint

Overview

Virto Mini Calendar is intended to show all the events from different data sources (SharePoint List, SQL Tables, Microsoft Exchange, XML, Google Calendar, SharePoint List Web Service) in one small single calendar.

The most valuable feature of the Virto Mini Calendar is having all the events from different data sources displayed in a single calendar view with opportunity of easy navigation between months and viewing highlighted items by date. This is especially notable value in comparison with most other calendars that can only use one data source. To distinguish events from different sources, likewise in Virto Calendar, multi-level color coding is used, though Virto Mini Calendar allows using color-coding for titles of events.

Virto Mini Calendar can be easily connected to Virto Calendar and applied by users as navigator for Virto Calendar by switching from month to month.

Virto Mini Calendar is built on Ajax technology and is designed for Windows SharePoint Services 3.0 and Microsoft .NET Framework 3.5 and 4.5. Installation is simple and only requires a small amount of time.

System Requirements

Operating System

Microsoft Windows Server 2003, 2008, 2012

Server

SharePoint Release 2013:

- Microsoft Windows SharePoint Foundation 2013 or Microsoft Office SharePoint Server 2013;
- Microsoft .NET Framework 4.5;

SharePoint Release 2010:

- Microsoft Windows SharePoint Foundation 2010 or Microsoft Office SharePoint Server 2010;
- Microsoft .NET Framework 3.5;

SharePoint Release 3:

- Microsoft Windows SharePoint Services v3 or Microsoft Office SharePoint Server 2007;
- Microsoft .NET Framework 3.5;

Note: This product is not compatible with SPS 2003 and WSS v2.

Browser

Microsoft Internet Explorer 7 or higher.

Installation

This section describes how to install, upgrade, uninstall, or contact Support for Virto Mini Calendar Web Part.

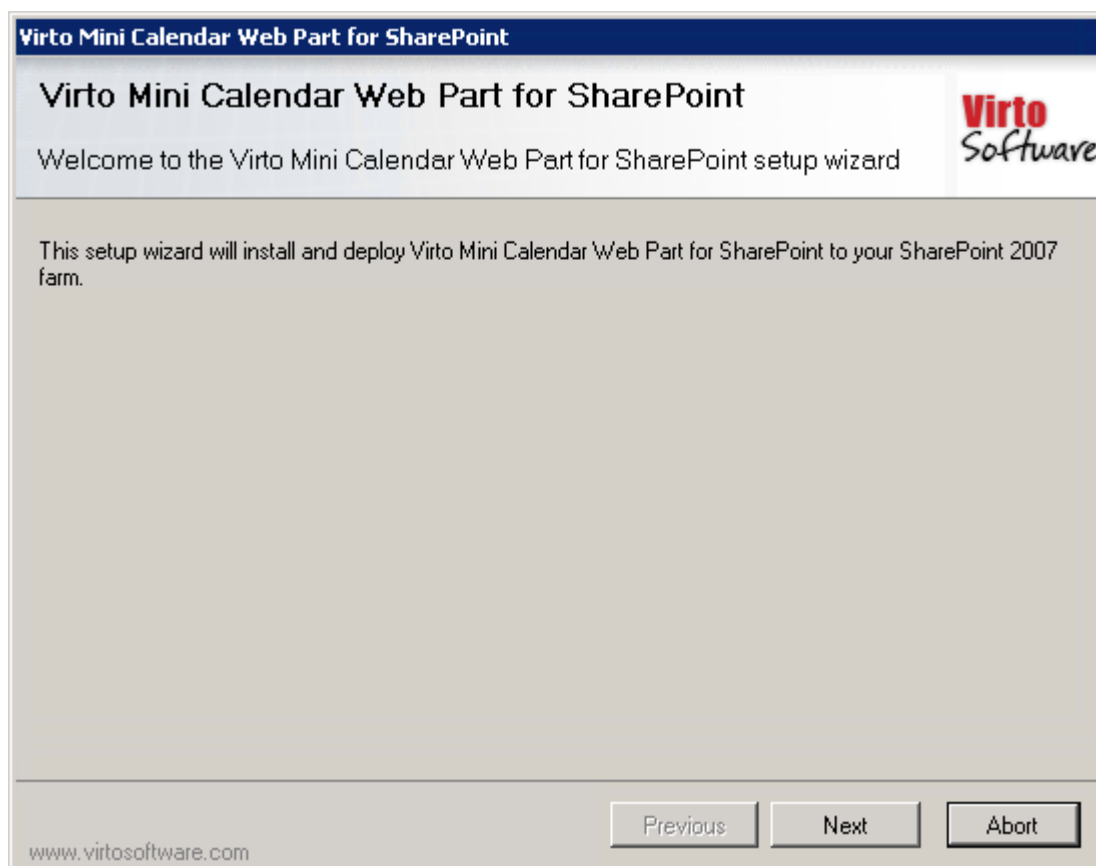

Installing Virto Mini Calendar Web Part for SharePoint 2007

Before you begin, you need to make sure you have access to the server and your account must have the appropriate administrative privileges to install applications.

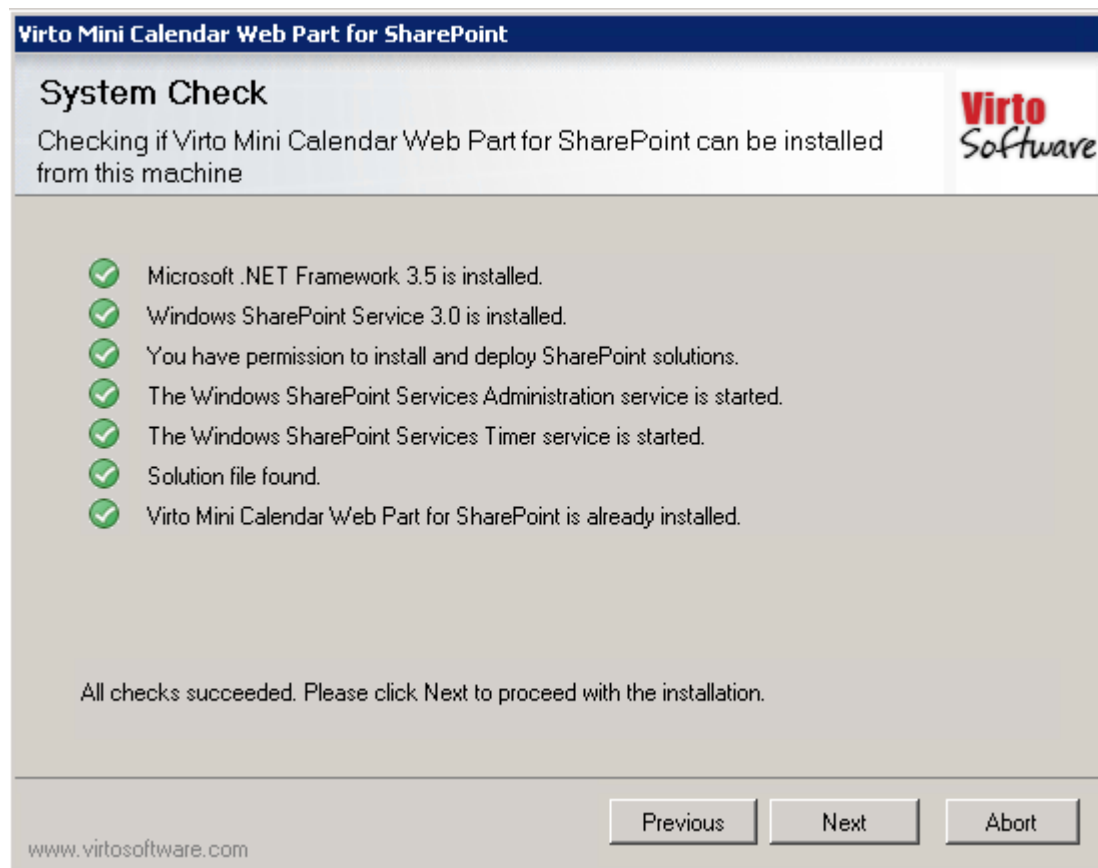

The Virto Mini Calendar setup program provides links to the various installation components for the Mini Calendar.

To access the Virto Mini Calendar Setup program download **Virto.Minicalendar.WebPart.zip** file and unzip it. Run extracted Setup.exe file.

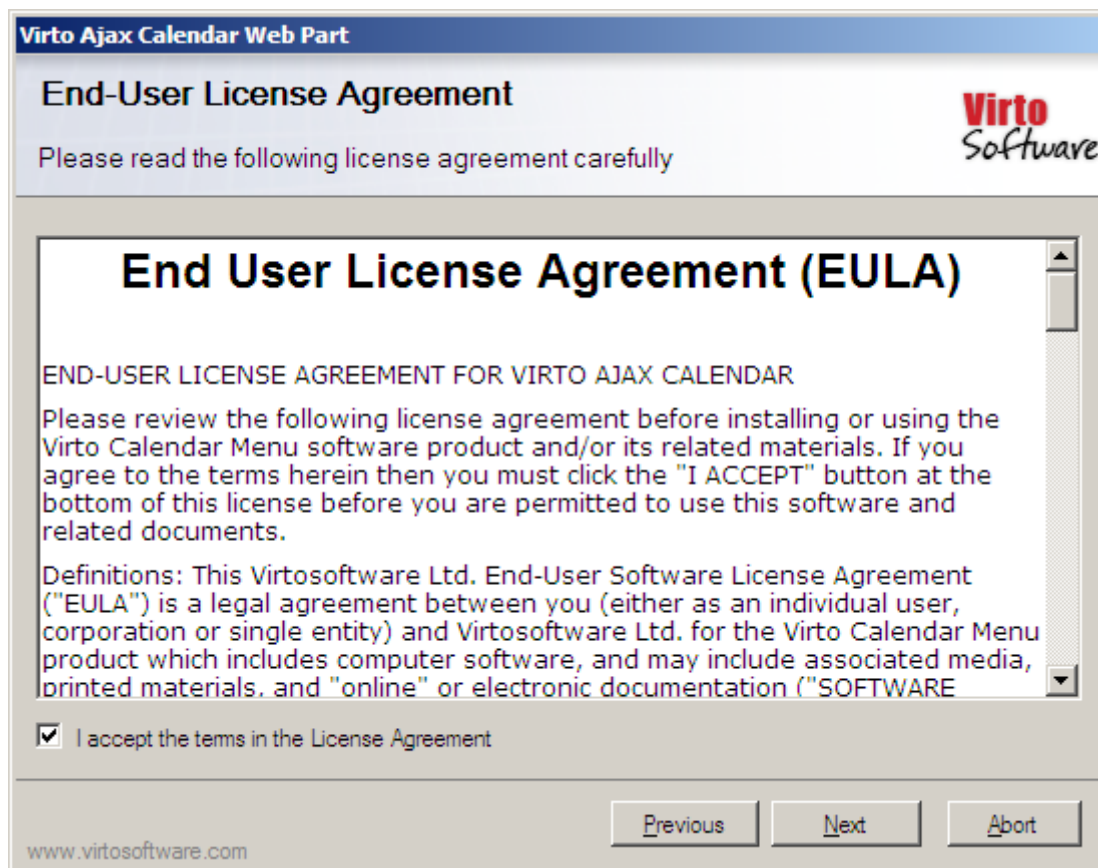

The setup wizard window will appear.

Virto Mini Calendar Web Part Setup wizard performs a system check prior to the installation. All the system checks must be completed successfully in order to proceed with the installation. After the checks have completed, click "Next".

Check "I accept the terms in the License Agreement" and click "Next".

Select the web application(s) where you want to install the product.

Warning: You must be logged in to the SharePoint server with a Site Collection Administrator account to automatically activate this feature.

The screenshot shows a web-based installation wizard titled "Virtto Mini Calendar Web Part for SharePoint". The main heading is "Site Collection Deployment Targets". Below the heading, it says "Please select one or more web applications / site collections". On the right side, there is a "Virtto Software" logo. The central area is titled "Web Applications / Site Collections:" and contains a list of two items:

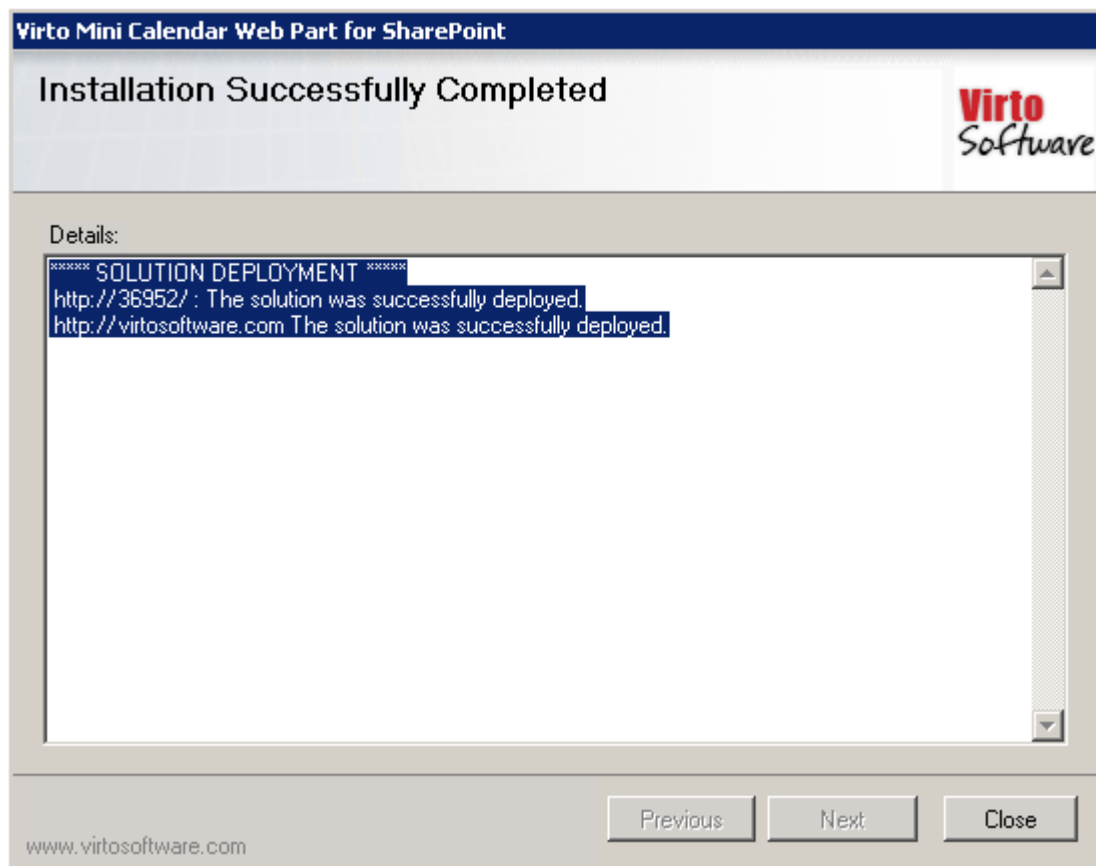

- ☐ http://17493/ (Shared Resource Provider) (2 site collections)
- ☒ http://virtosoftware.com (SharePoint - 80) (3 site collections)

Below the list, it says "Please click the Next button to start the installation process." At the bottom right, there are three buttons: "Previous", "Next", and "Abort". The bottom left corner shows the URL "www.virtosoftware.com".

Then click "Next".

The screenshot shows the next step in the installation wizard, titled "Installing". It says "Please wait while Virtto Mini Calendar Web Part for SharePoint is installed". On the right side, there is a "Virtto Software" logo. Below the text, there is a progress bar that is partially filled with a dark blue color. Below the progress bar, it says "Waiting for solution deployment job to complete. Press Abort to stop." At the bottom right, there are three buttons: "Previous", "Next", and "Abort". The bottom left corner shows the URL "www.virtosoftware.com".

Click “Close” to complete the installation.

Installing Virtto Mini Calendar for SharePoint 2010

Before you begin, you need to make sure you have access to the server and your account must have the appropriate administrative privileges to install applications.

Virtto Mini Calendar for SharePoint 2010 setup program provides links to the various installation components for the Mini Calendar.

To access Virtto Mini Calendar for SharePoint 2010 Setup program download **Virtto.MiniCalendar.WebPart_2010_X.X.zip** file and unzip it. Run extracted Setup.exe file. Then install the web pat as described in previous section.

Installing Virtto Mini Calendar for SharePoint 2013

The installation is similar to the process described for SharePoint 2010 version.

License Activation

To see full instruction for successful activation of your component, please download “Virtto License Manager” PDF instruction from [Downloads](#) section of our site or read it in [Wiki](#).

Uninstalling Virto Mini Calendar Web Part

To uninstall the Web Part:

1. Double click the Setup.exe extracted from downloaded **Virto.MiniCalendar.WebPart.zip** file.
2. The program performs the system checks again. Once that has successfully completed, the program prompts you to Upgrade or Remove the solution. Select Remove, and click "Next".

Minor Upgrade of Virto Mini Calendar Web Part

When the minor upgrade of Virto Mini Calendar version is released, the version number is increased accordingly. For example, 2.1 to 2.2 is minor update of 2nd version.

If you already use Virto Mini Calendar and need to upgrade it to the latest version, download the.zip file from <http://www.virtosoftware.com>. Unzip the file and run setup.exe as it is described in the *Installing Virto Mini Calendar Web Part* section.

Note: it is highly recommended to exit License Manager before upgrading. If you need to use License Manager, run it after upgrading.

On the step 3 check the box "Upgrade" and click "Next".

Note: *if you had activated the license while installing the previous Virto Mini Calendar version, you do not need to activate it now.*

Major Upgrade of Virto Mini Calendar Web Part

When the major upgrade of Virto Mini Calendar version is released, the version number is increased accordingly. If 2.1 to 2.2 is **minor** upgrade, 2.0 to 3.0 is **major** upgrade. The procedure of major upgrade requires more steps to do but will help you to avoid incorrect working of the software.

To upgrade Virto Mini Calendar (for example from 2.2 to 3.0), please follow the instruction below:

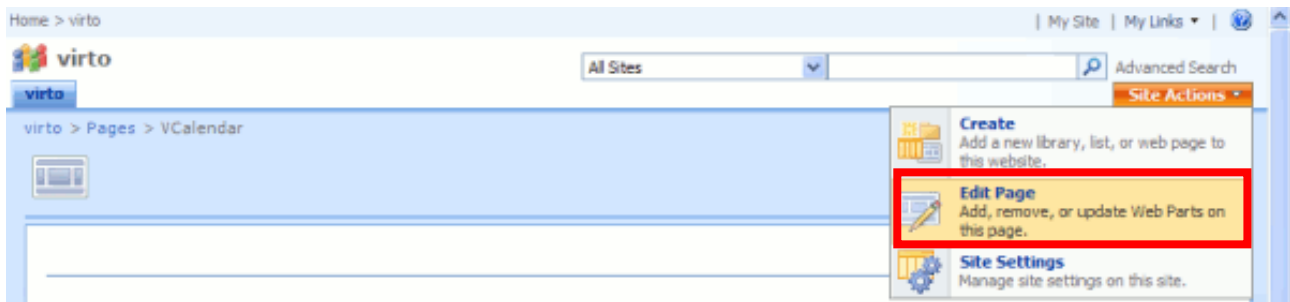

1. Send e-mail with a request of a license to sales@virtosoftware.com.
2. Run License manager and deactivate the license of the current version.
3. Uninstall the current version.
4. Download new version from www.virtosoftware.com and install it.
5. Run License Manager and activate the license.

See previous sections to get more information about installation, uninstallation and activation.

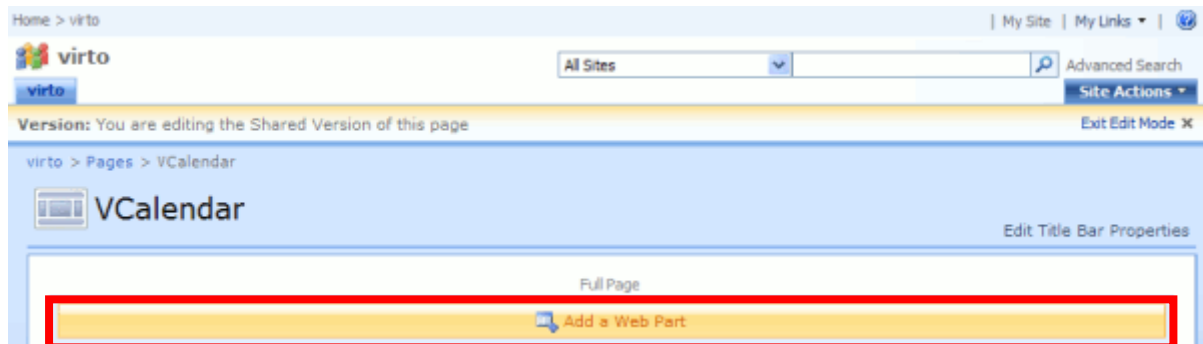

Administration and Usage

Adding the Web Part to a Page in SharePoint 2007

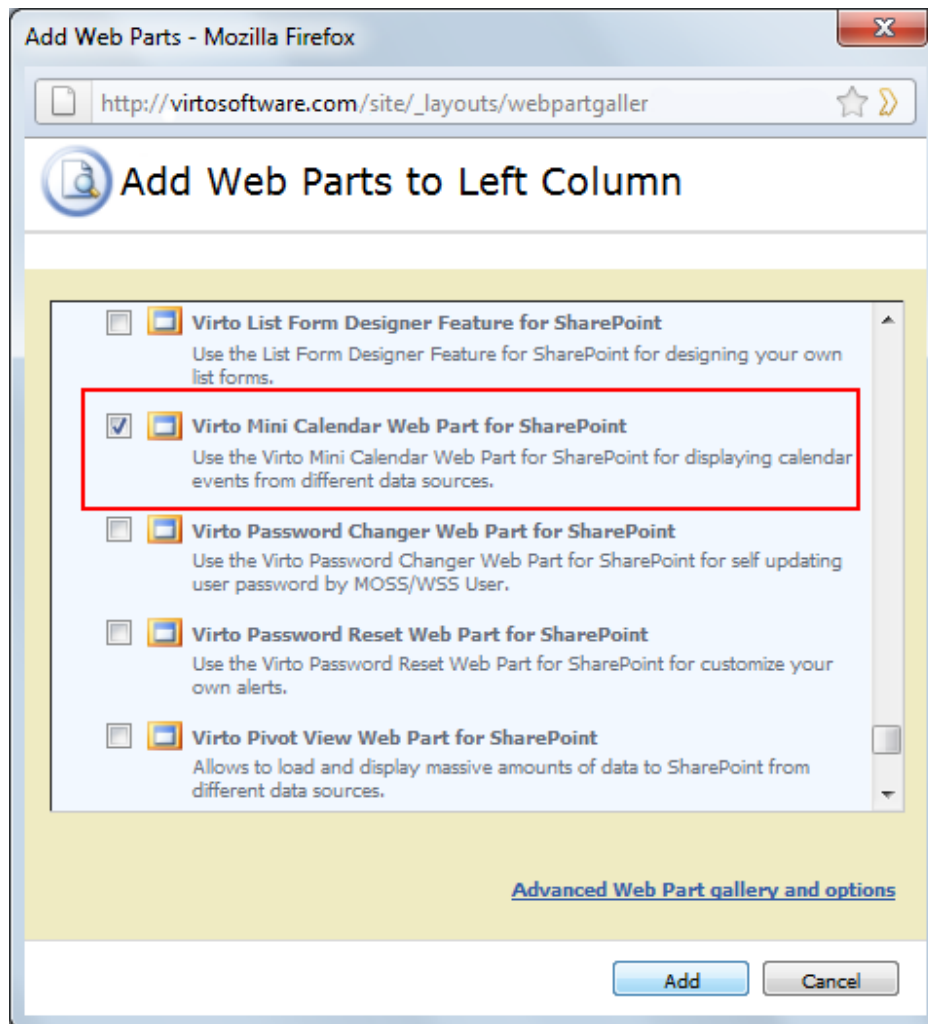

Go to SharePoint site where you want to add the Mini Calendar and open “Site Actions - Edit page”.

You will switch to edit mode. Click “Add a Web Part”.

Select Virto Mini Calendar Web Part at the bottom of the list and click “Add”.

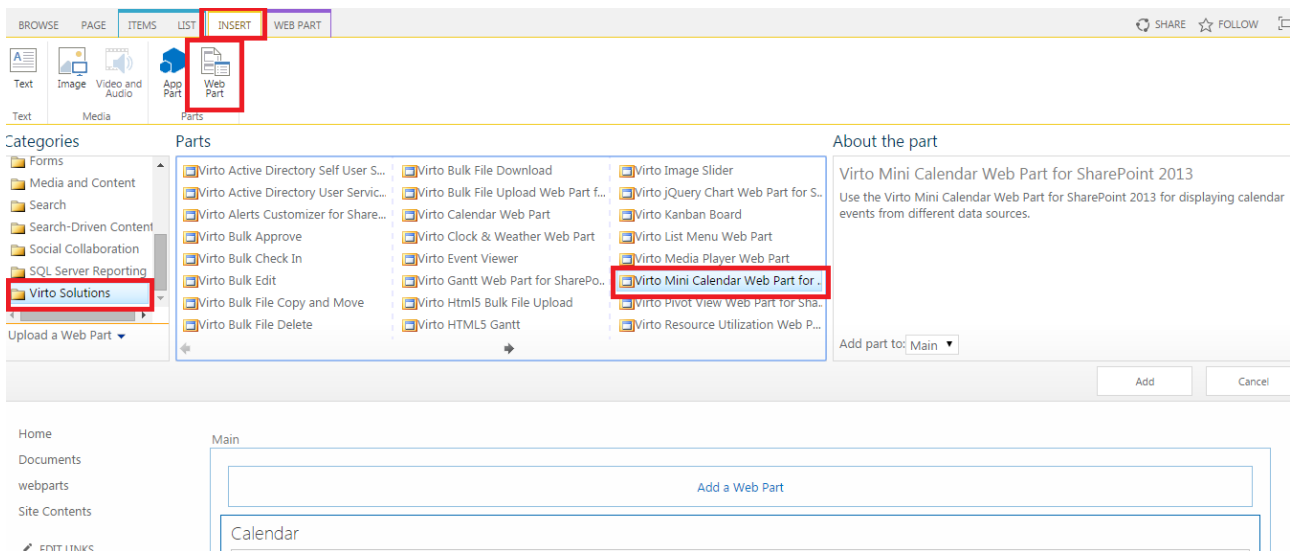

Once you have clicked "Add" button, use "Exit edit mode" button.

Note: when a web part Mini Calendar is being added, the current web-site is scanned for lists of Mini Calendar type (or events). If there are any lists of this type, they events will be already added to the Data Source of new Mini Calendar.

Adding the Web Part to a Page in SharePoint 2013

When Mini Calendar Web Part is installed, go to required SharePoint site page and add web part through the site settings. Click "Edit" on Page, then press "Insert" on the ribbon and choose "Web Part".

Select “Virto Solution” in Categories and then select Virto Mini Calendar Web Part from the list of available web parts.

Now add Mini Calendar Web Part to the SharePoint site page and save the changes on page.

Mini Calendar Overview

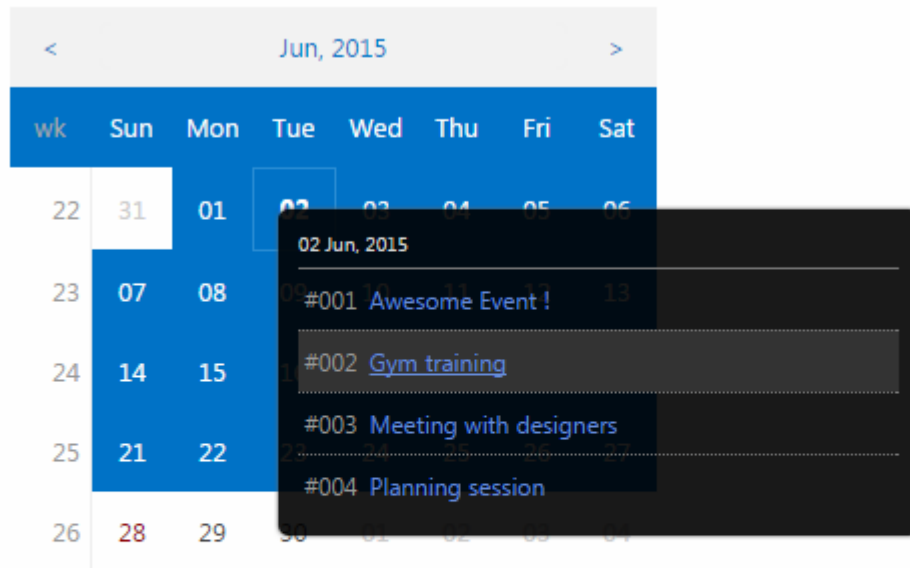

Access to Mini Calendar Items (Security Settings)

The items displayed in Virto Mini Calendar are visible for Mini Calendar users according to SharePoint security settings. If there are special access settings for every SharePoint list’s items, they will be applied to these items in the Mini Calendar.

For example, users with no access rights to items of List 1 will not see these items in the Mini Calendar. If they have rights of List 2 item management they will be able to move, edit, resize and etc. these items in Virto Mini Calendar. And if they have just read-only rights applied for List 3, they will be able to view items of this list in the Mini Calendar but will have no ability to change any information of them (edit, resize, move, delete).

Preview Events for Selected Date

It is allowed to preview events for selected date. Click on required date to show the list of events planned for this date.

02 Jun, 2015

11:30 Awesome Event !

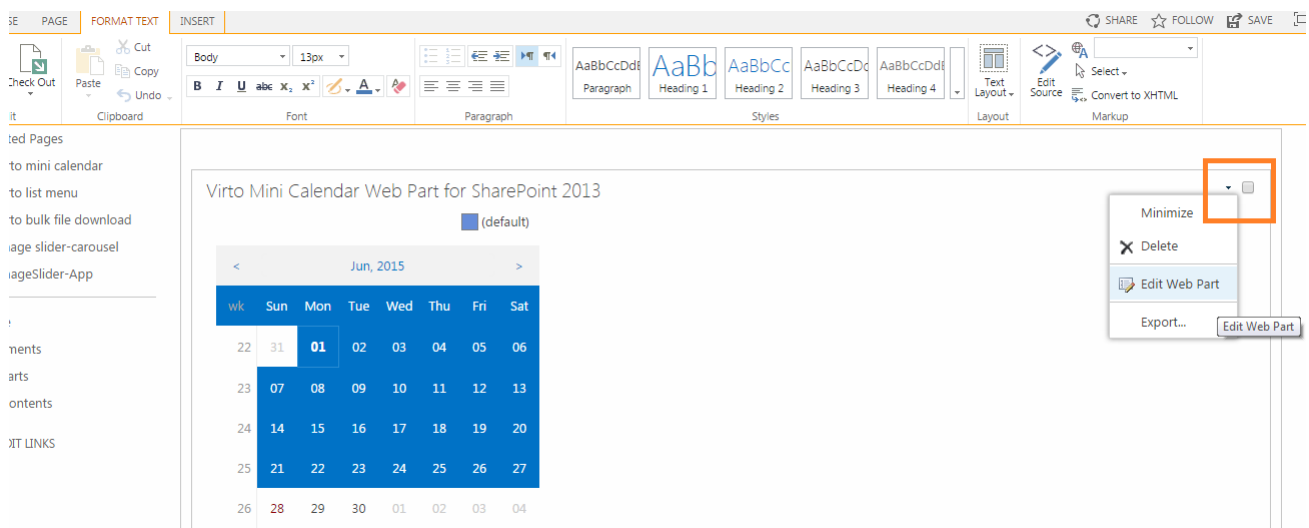

19:00 Gym training

13:00 Meeting with designers

09:30 Planning session

Mini Calendar Configuration

All the configuration settings are made in the “Edit” menu in the right upper corner.

The settings block will be displayed in the right part of the page.

The screenshot displays the Virto Mini Calendar Web Part for SharePoint 2013. The main view shows a calendar for June 2015. The calendar is a table with columns for days of the week (Sun, Mon, Tue, Wed, Thu, Fri, Sat) and rows for dates. The date 01 is highlighted. The properties pane on the right lists various settings:

- Number of rows: 1
- Number of columns: 1
- Cell width: 30 px
- Cell height: 30 px
- ☒ Show week numbers
- ☒ Show Data Source Legend
- ☐ Display events for selected date below calendar
- ☐ Expand events after clicking on table cell
- ☒ Do not use navigation links on calendar dates
- Navigation buttons mode: On each month
- Localization: 1033.English
- Calendar theme: vmc_default
- Event time settings:
 - ☐ Display event start time in light popup

Virto Mini Calendar Properties

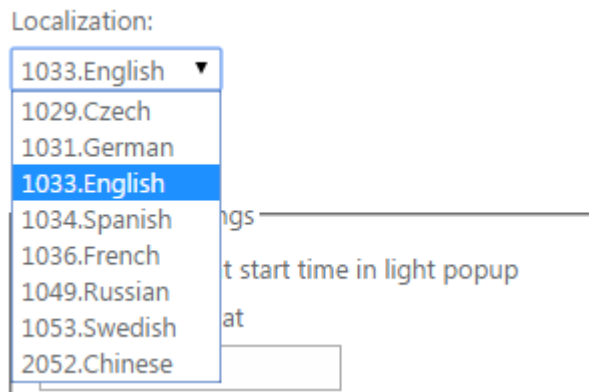

You can define number of rows and columns that will displayed. Then enter cell width and height in pixels. You can check the box “Show week numbers” and “Show Data Source Legend”.

Adjust events displaying and navigation links on calendar dates. Then you can define navigation buttons mode: “On first and last month only” or “On each month”.

This screenshot shows the properties pane for the Virto Mini Calendar Web Part for SharePoint 2013. The settings are as follows:

- Number of rows: 1
- Number of columns: 1
- Cell width: 30 px
- Cell height: 30 px
- ☒ Show week numbers
- ☒ Show Data Source Legend
- ☐ Display events for selected date below calendar
- ☐ Expand events after clicking on table cell
- ☒ Do not use navigation links on calendar dates
- Navigation buttons mode: On each month
- Localization: 1033.English
- Calendar theme: vmc_default
- Event time settings:
 - ☐ Display event start time in light popup
 - Event time format: [Empty text box]
 - Event date format: [Empty text box]

And then select localization.

Also, you are able to define event time settings, adjust time and date formats.

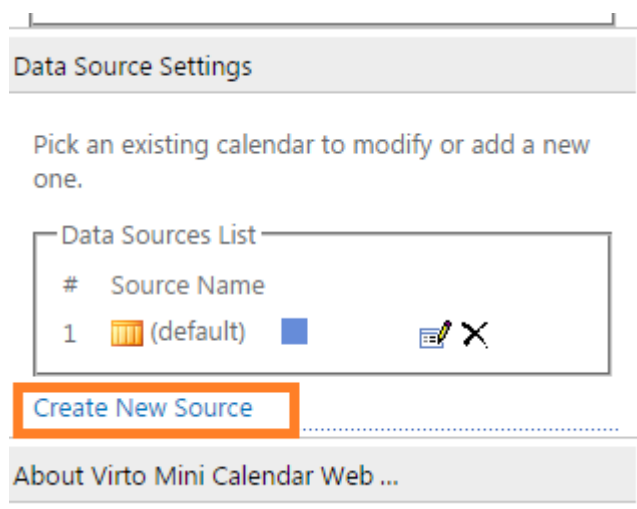

Data Source Settings

Virto Mini Calendar supports the following types of data sources:

- SharePoint List;
- SQL List;
- Xml file;
- Google calendar;
- SharePoint list web service;
- Exchange Calendar.

SharePoint List Data Source

To add new data source to the Mini Calendar, use “Create New Source” link.

Select “SharePoint List” in the list of data source types.

Type the name of new data source and check the box “Show in Calendar” to make it visible in the calendar.

Create New Source

Data Source Settings

Fill out all the required fields and click Save button below.

Source Name

Mini calendar test

☒ Show in calendar

☒ SharePoint List

☐ SQL List

☐ Xml file

Save Close

The SQL list will appear in the list of data sources.

Click “OK” and return to your Mini Calendar. Events from your SQL database will be displayed in the Mini Calendar.

Now you can also create new events in the selected database (table) through the Mini Calendar. In case you delete the SQL list data source, items will disappear from the Mini Calendar but will be saved in the database on SQL server.

External Content Type Data Source

Virto Mini Calendar allows adding external content type as a data source. An [external content type](#) is a reusable collection of metadata that contains connectivity information and data definitions plus the behaviors you want to apply to a certain category of external data. Creating an external content type is usually the first step in bringing data from external data sources into SharePoint 2010 and Office 2010 applications by using the Microsoft Business Connectivity Services (BCS).

Note: when external content type is added to SharePoint Designer, it is required to define access rights for SharePoint users. If access rights are not defined, this type of data source will not work for Virto Mini Calendar.

Go to Virto Mini Calendar settings and click “Create new source”. Enter source name, choose “External content type”.

Then select external content type (click “Select external content type”) and text connection.

Create New Source

Data Source Settings

Fill out all the required fields and click Save button below.

Bob

Password

Test Connection

If Microsoft Exchange Server is installed on another domain, you should enter login and password (it can be login and password of a user who's Exchange Mini Calendar you need to display) for connection to Exchange Server. Click "Test Connection" to verify the settings.

Now when a user goes to a page with Virto Mini Calendar on his SharePoint site, he will see the items from Exchange Mini Calendar of a user whose login and password were entered in the settings block.

Select a color for items from Exchange Server or use RGB code to define the required one. Specify Tooltip and Advanced options as described in previous sections and click "Save" to add new data source.

Pick a Calendar

You can optionally pick a specific mailbox calendar to display (for example a conference room calendar).

Private events processing:

- ☒ Do not show private events
☐ Show private events as empty rectangles
☐ Show private events

Select Color For Item

Color:

R: G: B:

Exchange data source will appear in the list of data sources.

Now when a user goes to a page with Virto Mini Calendar on his SharePoint site, he will see the items from Exchange Server.

Now Virto Mini Calendar and Exchange are synchronized. If you make any modifications (for example, add a new item) in Virto Mini Calendar, the same item will appear in Exchange Mini Calendar.

Note: Exchange data source must be selection while creation in Virto Mini Calendar to make this item appear in Exchange.

If you make any modifications with events in Exchange, it will be synchronized with Virto Mini Calendar (for example, create an event).

Fields Compliance

Pay attention to item fields of Exchange items and Virto Mini Calendar items. Please explore the table below to know which Exchange fields will be transferred accordingly to Virto Mini Calendar.

Fields Compliance

Field	Exchange	Virto Mini Calendar
Subject	+	+
Location	+	+
Start Time	+	+
End Time	+	+
Description	+	+
Required	+	+
Optional	+	+
Resources	+	+
Reminder	+	-
Attachments	+	-

Pay attention to fields highlighted with **red**. If you create an event in the Exchange and fill out these fields, they will not be transferred to corresponding Virto Mini Calendar item. If you had an attachment in the Exchange item, please attach the required file again to the corresponding item in Virto Mini Calendar.

XML Data Source (only Exchange editions)

You can use any XML file as a data source in your Mini Calendar. Create new data source in the Mini Calendar settings and select “XML file” data source type and check the box “Show in Mini Calendar”.

Note: xml information displayed in Virto Mini Calendar is read only.

All the XML information is define with xpath strings. The following strings are required to enter: **path to XML file**, **XPath string for Mini Calendar events**, **XPath string for Mini Calendar event start date**. Other fields are not required: Xpath string for Mini Calendar event title, XPath string for Mini Calendar event end date, XPath string for Mini Calendar event IsAllDay flag and XPath string for Mini Calendar event tooltip. Please see [Xpath examples](#) to define event information.

Note: if end date is not defined, it will be equal to start date.

Define namespaces to extend formats of processed XML files. You need to define prefix and value (separated with space). Namespaces are separated with “enter”. See “**Adding Google Mini Calendar Events to Your SharePoint Web Site**”.

Path to xml file

Prefixes and namespaces

atom	▲
http://www.w3.org/2005/Atom

Select Color For Item

Red	Pink	Purple	Blue	Dark Blue	
Teal	Green	Light Green	Yellow		
Orange	Brown	Grey			
Dark Green	Dark Brown				

Click “Save” to save new data source.

Since RSS is XML file, you can add any RSS feed to your Virto Mini Calendar. For example, news feed. In this case you need to enter URL generated for XML feed in to “Path to xml file” field. Please see the section below as an example.

Google Calendar Data Source

Virto Mini Calendar allows users to add Google Calendar data source and adjust Google Calendar events’ view in Virto Mini Calendar.

Go to “Edit web part” and roll down to data source settings block.

Click “Create new source” and select “Google Calendar” data source.

Data Source Settings

Fill out all the required fields and click Save button below.

Source Name

☒ Show in calendar

☐ SharePoint List
☐ SQL List
☐ Xml file
☒ Google calendar
☐ External content type
☐ SharePoint list web service
☐ Exchange Calendar

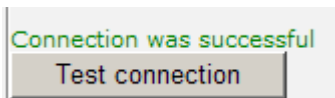

Google user name (example: john.doe@gmail.com)

Password

Available calendars

Then enter user name (Google account name) and password of user whose Calendar will be added as a data source. Click "Test connection" to check if the data are correct.

If test connection is successful, you will see the message.

The list of available Mini Calendars will appear. Select **one** Calendar to display events from it in Virto Mini Calendar.

Note: to add more than one Calendar add required amount of Google Calendar data sources and select required Calendars for them.

Select color for Google events displayed in Virto Mini Calendar. (Even if this color is defined in Google Calendar settings, it is required to set it again in Virto Mini Calendar).

Select Color For Item

Color:
R: 12 G: 220 B: 87

Save Close

Click “Save” to save new data source.

Click “OK” or “Apply” to save the settings.

Now you can view events from Google Mini Calendar in Virto Mini Calendar among other data sources.

Note: if Google Calendar data source has no “Read only” settings, users will be able to create new events in Virto Mini Calendar, move them and delete. But there will be no ability to edit the event. All the modification made in Virto Mini Calendar will be accordingly reflected in Google Calendar and vice versa.

SharePoint List Web Service (Read Only)

Virto Mini Calendar allows users to select SharePoint List Web Service as a data source. The data source is read only and used to view events from other SharePoint farms.

Go to data source settings and create new data source.

Create New Source

Data Source Settings

Fill out all the required fields and click Save button below.

☒ Filters Options

If you need to create recurring events in "SharePoint list web service" data source (for SharePoint 2007 version), you have to install SharePoint hotfix for recurring events correct expanding in "SharePoint list web service" data source.

<http://support.microsoft.com/kb/977027/en-us> for WSS 3.0

<http://support.microsoft.com/?kbid=977026> for MOSS 2007

Make a backup of your SharePoint databases before installation. Run "SharePoint Products and Technologies Configuration Wizard" after hotfix installation.

Filters Options of Data Source

Filter options allow you to display only items which satisfy the filter. Filter can be set for every data source.

Expand "Filters Options" in the specified settings of your data source.

Filters Options

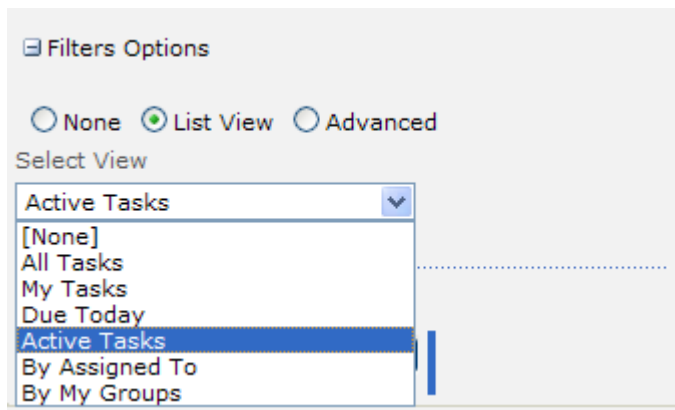

☒ None ☐ List View ☐ Advanced

Save

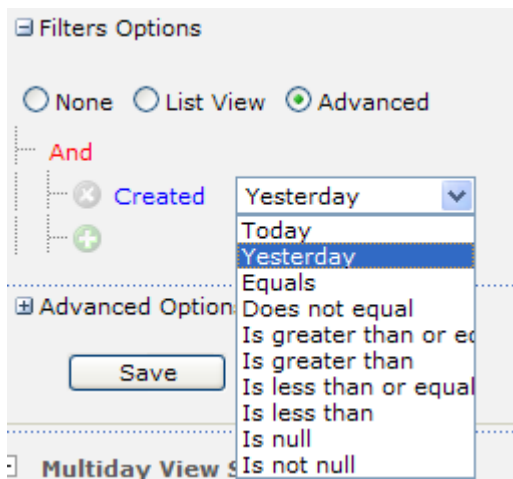

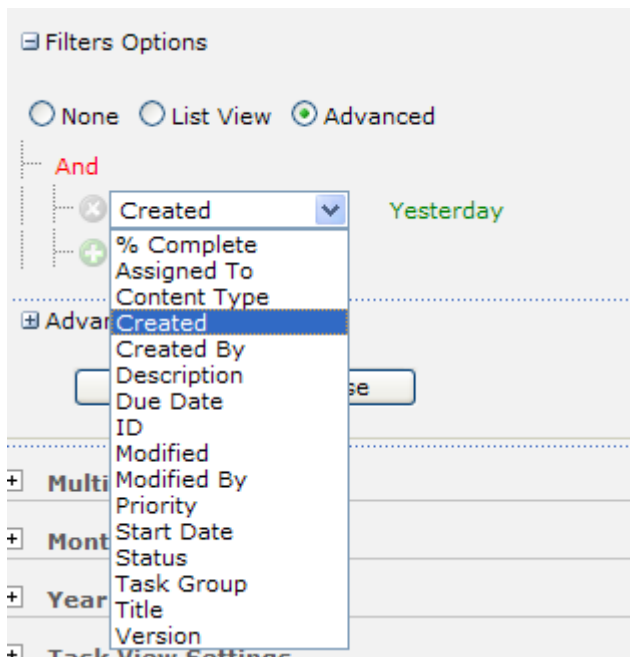

Close

There are two options of filters in the Mini Calendar.

If you select "List View" filter, you will have to define list view according to which the Items will be displayed (for example, only active tasks will be shown).

If you select "Advanced" filter, you will be able to define special conditions according to which items from this list will be displayed. For example, you can display only tasks created yesterday. In order to set the filter, click green icon and select "Created" and "Yesterday".

You can create conditions of any level of complexity using special operators.

Do not forget to click “Save” after adjustment.

Version Release History
